Forecast for Friday 30 Apr 2021

Weather: Mainly fine during the early hours, with clear spells allowing a frost in valleys, although cloud amounts should generally increase towards dawn. By day, some sunny spells should develop, however with time these are likely to spark off some showers. These may become locally heavy and prolonged later in the day given the light winds, falling as snow above around 500 metres in te heaviest, with hail and thunder also a possibility, mainly through the middle of the day. Showers should ease later, leaving a drier but on the whole cloudier late afternoon and evening, with temperatures quickly dipping.

Chance of cloud free mountain/hill tops above 600m: 70 percent, with early cloud over the highest tops soon lifting clear, ahead of more temporary but potentially hazardous interruptions in heavier snow showers later, with cloud potentially returning for periods.

Visibility: Generally very good, but note likely presence of heavy showers which will significantly reduce the prevailing visibility and lead to potentially hazardous navigation conditions over higher elevations.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Although not especially windy, the presence of potentially prolonged and wintry showers will mean that chill is more of a factor. Note that these showers are more liable to form over exposed ground, potentially proving deceptive from more sheltered starting locations.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Thu 29 Apr 2021	0.2mm	1.2mm	1.8mm

Forecast for Saturday 01 May 2021

Weather: Chilly with clear spells and frost to start. A similar-feeling day to Friday, with surther sunny spells and increasingly sharp showers, perhaps slightly less liable to turn wintry and thundery, but the risk of both remains, as well as hail showers. Showers again fading into the evening to leave clear spells and sharply falling temperatures.

Maximum wind: 15mph northeasterly.

Chance of cloud free mountain/hill tops above 600m: Greater than 90 percent.

Visibility: Very good, although sharp drops again possible given heavy or wintry showers.

Temperature: **Valleys:** Minus 4 becoming plus 9 Celsius.
At 600m: Plus 2 Celsius.
Freezing level: Around 600 metres at first, rising clear of the highest ground through the morning.
